Kochi, Kerala

EDUCATION

**B. Tech Computer Science
and Engineering**

Cochin University of Science
and Technology University
Graduated 2017

**Technical High Secondary
Board**

Model Higher Secondary School,
Kaloor, Kerala
Graduated 2013

SUMMARY

Senior Infrastructure Engineer with 9 years of experience building and operating scalable, automated cloud infrastructure. Deep expertise in Kubernetes and GCP, with a strong emphasis on Infrastructure as a Service, GitOps, and operational automation. Proven track record in cloud migrations, platform reliability and managing large-scale distributed systems. Experienced mentor and collaborator who drives infrastructure efficiency and resilience across teams.

EXPERIENCE

SENIOR INFRASTRUCTURE ENGINEER

Truecaller - Stockholm, Sweden

Oct 2017 - May
2026

- Designed, built, and operated scalable cloud and Kubernetes-based platforms.
- Owned production infrastructure in GCP, with deep focus on automation, reliability, and Infrastructure as a Service.
- Supported hybrid on-prem and cloud environments with a strong emphasis on uptime and performance.
- Collaborated with application, payments, telephony, and analytics teams to design scalable infrastructure solutions.
- Operated and optimized distributed systems including Cassandra, ScyllaDB, Redis, MongoDB, Elasticsearch, and Memcached.
- Provided L1/L2 on-call support and collaborated cross-functionally to resolve complex production issues.
- Mentored new hires, onboarded engineers, and conducted interviews for senior roles across different disciplines.

DEVOPS ENGINEER

SKILLS

- Cloud Infrastructure (GCP & AWS)
- Kubernetes Administration
- Kubernetes Operator Development
- Infrastructure as a Service (Terraform, Google Config Connector)
- Automated configuration Management (Ansible, Cloud-Init, Chef)
- Software Development (GoLang)
- Monitoring & Logging (Grafana Stack, ELK Stack, Splunk, Cloud Monitoring)
- Database Management & Optimizations (Cassandra, ScyllaDB, PostgreSQL etc)

HOBBIES

- HomeLab
- Trekking
- Traveling

REFERENCES

Available upon request

- Automated application deployments and improved reliability in AWS-based environments by introducing metrics based autoscaling.
- Owned CI/CD pipelines and cloud automation, ensuring stable, repeatable deployments for production systems.
- Actively supported production operations by troubleshooting incidents and maintaining high system availability.

PROJECTS

KUBERNETES PLATFORM & IaaS ENABLEMENT

- Developed custom Kubernetes operators for Scylla and Redis, fully automating day-0, day-1, and day-2 operations.
- Designed and implemented an end-to-end test framework for Kubernetes operators, tightly integrated with GitHub CI to prevent production regressions.
- Led the migration from self-managed Istio to Anthos Service Mesh, reducing operational overhead and improving platform stability.
- Setup CI/CD pipelines for Kubernetes based Infrastructure deployments, enabling GitOps model deployments via Github and Google Kubernetes Config Connector.

CLOUD MIGRATION & MODERNIZATION

- Contributed to the migration of all on-prem infrastructure to GCP, enabling 100% cloud adoption.
- Led the AWS-to-GCP migration of the payments platform to align with company-wide cloud strategy.
- Designed and rolled out a production-grade GKE cluster following a successful proof of concept

INFRASTRUCTURE AUTOMATION & GitOps

- Established GitOps practices using Google Config Sync, standardizing infrastructure deployments and change management.
- Introduced Terraform for GCP, automating infrastructure provisioning and improving consistency across environments.
- Implemented Ansible for configuration management, reducing configuration drift and manual effort.

OBSERVABILITY & RELIABILITY

- Rolled out Grafana Mimir across the entire company after a successful PoC, significantly improving metrics scalability and observability.

COST OPTIMIZATIONS & SECURITY HARDENING

- Built a Python-based orchestration solution using Hadoop/HDFS to replace Dataproc, delivering significant cost savings.
- Led MongoDB sharding and cluster-splitting initiatives to improve scalability and reliability.
- Configured Kerberos authentication to secure analytics and data pipelines.
